E-ISG Asset Intelligence and Psion Teklogix Deliver a Complete Government Solution for Your Mobile Asset Management Needs

Cost-Effective Control: Track Assets Anytime, Anywhere

E-ISG Asset Intelligence and Psion Teklogix have partnered to bring government agencies an asset tracking solution that meets all the latest government requirements. There are challenges associated with tracking varied assets, especially when your organization has several mobile workers out in the field moving items to several locations. Managing each item's whereabouts is painstakingly tedious and requires a lot of attention, especially when new government restrictions or policies are developed. Fortunately, we have the solution that not only meets the government's standards but also enables your organization to streamline the asset management process.

There are many mandates associated with accurate asset reporting. Below are some of the federal requirements:

1. All organizational elements shall use commercial and/or government standards to account for personal property through its life cycle.

2. Departments/agencies must establish physical control to secure and safeguard vulnerable assets.

3. All items shall be tracked using bar code technology and/or radio frequency identification (RFID), manufacturer serial numbers and model numbers.

With such strict guidelines, your department needs a mobile solution to not only meet the criteria the government demands but also combat the challenges associated with tracking varied assets.

E-ISG Asset Intelligence and Psion Teklogix Deliver a Complete Government Solution for Your Mobile Asset Management Needs

A Complete Solution: Asset Intelligence

Take control of your assets and know where they are, what you have and how much it's worth! In order to comply with the new government standards, your organization needs a mobile asset life-cycle management solution. With E-ISG Asset Intelligence's Visual Asset Manager Workbench software running on Psion Teklogix handheld devices, your department will be equipped to do business while meeting the new standards.

How Does Your Asset Management Solution Measure Up?

When it comes to managing assets, many organizations track items via spreadsheets or desktop database programs. With E-ISG Asset Intelligence's Visual Asset Manager software, department managers can read a bar code, RFID tag or part code, and update the data in real time using wireless or GPRS. The Visual Asset Manager software enables companies to streamline their asset management process with easy access to locate goods. The data can be collected and cataloged by location and sent to the central database in minutes with information immediately available for use. Items that need to be tracked are found quickly and reliably.

The Visual Asset Manager software enables your organization to do the following:

- See all your assets and locations on an actual floor plan (or other graphical representation), not just rows of data.
- Customize asset categories in terms that make sense to departments such as finance, accounting, IT or facilities.
- Easily migrate data from legacy spreadsheets or other databases with Visual Asset Manager Importer.
- Accurately and efficiently manage inventory and employee or organization moves with handheld bar code scanning support.
- Manage mobile/loaner assets with an asset reservation calendar that is exportable to MS Outlook.
- Create an asset movement work order that schedules asset movement in advance with an approval to prevent unauthorized movement.
- Create a property pass for checking assets in and out while keeping a solid chain of custody audit trail. Create a digital signature to lock the records and prevent modification.
- Create and maintain a DD1149 Property Transfer log to automatically generate the DD1149 form and track and audit all property transfers.
- Built-in reporting with Microsoft SQL Reporting Services.

Access points

Affordable and flexible access points provide 802.11a/b/g/n wireless coverage for Psion Teklogix devices, and other voice and video devices. Access Points are available with multiple radio, antenna and enclosure configurations to fit different deployment scenarios. All access points can simultaneously multiple applications, users, wireless rogue scanning and spectrum analysis.

How It Works

Visual Asset Manager is a complete integration of the asset management process including asset identification and remote data collection using Psion Teklogix WORKABOUT PRO-g, NEO and Ikôn mobile computers equipped with bar code and RFID readers. The devices are synchronized through WiFi or GPRS connectivity to the database through the use of Sybase Mobilink Services. The asset audit process utilizing Psion Teklogix hardware lets the property manager physically audit assets as they are moved from the depot to the field as part of the workflow. This “FED-X” approach enables the property manager to scan the asset tag and the new location as the property is delivered or moved through the WiFi or WWAN connection and then updates the centralized database in real time.

This process satisfies both Government Accountability Office (GAO) and Department of Homeland Security requirements for control and safeguards.

Wireless Controller

E-ISG Asset Intelligence and Psion Teklogix have teamed with Aruba Networks to deliver secure and reliable wireless backbone for a wide variety of mobile applications on from the manufacturing floor, out in the yard, in the warehouse and in retail storefronts. Psion Teklogix mobile computers have been certified interoperable on Aruba’s rugged 802.11a/b/g/n wireless LANs, and this combination is used by numerous organizations to improve supply-chain efficiency.

ARUBA™ The Mobile Edge Company

An Asset Management Solution That Meets Industry and Government Regulations Day In and Day Out

With the introduction of Visual Asset Manager 6, asset management no longer needs to be difficult, expensive and time consuming. E-ISG Asset Intelligence simplified the process of asset management and enables your company to continue working without losing any of the functionality of other software with more demanding user interfaces. This process equates to less time spent training employees on complicated asset management software and more time working.

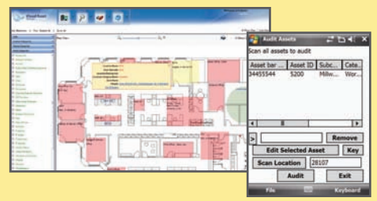
E-ISG Asset Intelligence

Visual Asset Manager 6 is a centralized asset database with simplicity of use, ease of importing data and compliance with full government and industry management standards.

Workbench Software

The Asset Manager Workbench is an integrated remote data-collection software running on Psion Teklogix WORKABOUT PRO-g, Ikôn and NEO handheld devices. The software enables mobile companies with field workers to audit or enter new asset information while working remotely. The software allows the real-time information that is entered into the devices to be sent to the company’s central location for reporting. Organizations no longer have to wait until the end of a shift to gather all the pertinent information regarding their goods.

E-ISG Asset Intelligence chose Psion Teklogix ruggedized mobile computers because assets are located in all sorts of terrain. Organizations need a device that is equipped for rain, dust, drops and direct sunlight use. Psion Teklogix devices are built for rugged environments and withstand daily abuse day in and day out.



What Visual Asset Manager Supports

Visual Asset Manager contains support for RFID readers that track assets in motion on the floor plan. Zones on the floor plan are shapes that denote ranges of the Psion Teklogix family of RFID readers and can track assets as they are moved in and out of the building. There is no need for expensive RFID middleware as Visual Asset Manager contains everything you need.

Handheld Computers Built for Rugged Mobile Computing

WORKABOUT PRO-g
Works as hard as you do.

The needs of business are changing almost daily, creating a demand for a fleet of handheld computers that can keep up. The WORKABOUT PRO-g, intelligent, rugged and most importantly flexible, is a new breed of handheld computers that delivers the choice of numerous add-ons, software applications and upgrades, making it work as hard as you do.

Ikôn
The rugged PDA for the real world.

There are rugged handheld computers and there is Ikôn, the most sophisticated mobile workforce automation device on the planet. The Ikôn delivers efficiency at its best and packs incredible functionality, class-leading ergonomics, aesthetics and sleek design into a user-friendly system. Its ability to fully integrate voice and data communication options into a single package eliminates the need for multiple devices, effectively reducing capital expenditures as well as substantial support costs.

7535
The flexible, rugged handheld computer.

The warehouse is a frantic place. When things go wrong, operations stall. Quickly. Which is why workers need the toughest, most powerful tools they can get their hands on. The 7535 G2 helps workers keep the warehouse in full production. No log-jam of products. Just a build up of profit.

8515
The compact vehicle-mount computer

Warehouses and ports. Manufacturing plants and airports. Think tight deadlines and even tighter spaces, especially on the forklifts and trucks themselves. Affixing a bulky computer to these just isn't an option.

Unless it's the compact 8515. This rugged, lightweight vehicle-mount computer gives you all the intelligence and connectivity you need in a very small package.

Tough Support for Tough Jobs

i-Serv Global Service

Harsh, unpredictable and punishing, the typical day in mobile computing demands rugged, reliable equipment. A service plan that's built for the job is just as important.

What is i-Serv?

i-Serv is the one global service plan for all Psion Teklogix devices, anywhere in the world. It is the one service plan that enhances productivity as it lowers total cost of ownership. i-Serv's informative, innovative, inclusive and interactive service solutions lead the industry to keep your business moving.

Informative

Answers to service questions when they're needed: Immediately. Accurate, real-time information from anywhere in the world is available 24/7 through i-Serv's exclusive online tracking system, Teknet. Do you need Return Material Authorization (RMA), interactive tracking of your products before and after repairs, and informative answers to your service questions and concerns anywhere in the world? Psion Teklogix' Teknet online tool does all of that and more!

Innovative

Leading the industry to higher standards is nothing new at Psion Teklogix. Unheard-of service extras, like on-site pickup, timing guarantees and one-on-one emergency support, put i-Serv, and your service needs, up front. Have you ever had an emergency service issue, but didn't have the time to deal with shipping the equipment back to the depot?

By purchasing i-Serv, we'll pick up your equipment without a hassle and guarantee our service lead time!

Interactive

With i-Serv, there's always someone to listen to you. Interactive help desk access assures you of immediate answers and support from certified service professionals. Are you tired of waiting on hold talking to a computer instead of a live person? With live, in-person help desk access, our customer care service solution guarantees your questions will not go unanswered. With eight-hour, five-days-a-week or available 24/7 help desk support, i-Serv has a level of service to meet your needs. And if your service issues are too complex for phone support, our help desk escalates your problem by bringing your device into the depot or dispatching a member of the Quick Action Group immediately to your facility.

Inclusive

Enterprise mobile computing requires toughness—and a service plan that's just as tough. i-Serv's superior coverage, including abuse repair, delivers optimum efficiency, less downtime and lower total cost of ownership (TCO). Would you still purchase—and rely on—an inferior data collector for your operation if you knew its TCO would be double or triple the sticker price? With i-Serv, Psion Teklogix helps to keep your services operational and your costs down, even repairing abused devices!
